PathView Report Server

Show IT's Alignment with Business Objectives

Networks comprise more of the fabric of our organizations than ever before. The centralization of IT resources, the growing move to virtual service delivery and the distribution of a company's employees means that nearly all businesses rely upon networked applications. This is true whether you work in an enterprise, a not-for-profit organization or a government agency.

As our network dependence has increased, so too has the pressure to maintain smooth, problem-free networked services. But the growing complexity of both physical networks and virtualized IT infrastructure limits your ability to see and understand performance on an end-to-end basis. That complexity also makes it difficult for you to show senior management how your efforts directly impact your organization's strategic initiatives.

You need more effective ways to assess the impact of networked service delivery on your organization's business objectives. You also need better ways to communicate performance information to your executive teams and to business and technical colleagues.

- Report Server's intuitive reports show
- key performance metrics for networked
- services including VoIP, video and
- virtual service delivery.

Apparent Networks recognizes these needs and developed the PathView Report Server to enable network managers to meet them. Report Server works in conjunction with PathView, Apparent Networks' departmental-level network fault and performance management tool.

The PathView Report Server enables network managers to easily show their alignment with and contribution to their organization's strategic business initiatives. It leverages the unique network path performance information provided by PathView to create reports that communicate IT's value - powerfully and persuasively - to any audience, including executive, business and technical staff.

Contact

Report Server's intuitive reports show key performance metrics for networked services including VoIP, video and virtual service delivery.

Powerful, Persuasive Reporting Made Simple

- Intuitive reports – Simple graphics and plain language in reports clearly show actual network performance against user-defined service quality levels.
 - » Showcases how network performance supports business results
- Automated reporting – Features enable users to set dates and times for automatic report generation and create recipient lists for automatic report distribution.
 - » Eliminates manual tasks, increases the visibility of IT's value
- Easy dissemination – Multiple delivery formats built in make it easy to get reports in the right format to the right people who need them.
 - » PDF, HTML, DOC, XLS, CSV and Flash
- Easy installation – The Report Server easily installs on the same system with PathView.
 - » Web-based access to PathView data; no client or agent required

Easy Customization Makes Reports with Impact

- Browser-based customization – Users can access the Report Server via the Internet to easily customize their reports and dashboards to meet particular business needs.
 - » Access anytime from anywhere
- Drag-and-drop convenience – Users can customize and rearrange the formats and contents of reports and dashboards quickly and easily.
 - » 'Mix and match' any predefined and custom reports into new dashboards
- Easily branded reports and dashboards – Users can easily customize the branding of reports and dashboards with logos and other corporate identity elements.
 - » Fast and easy way for service providers to add customer-friendly services
- Simplified report generation – PathView's expertly designed data sets make it easy for the user to generate effective reports.
 - » No database expertise required

Report Server presents information on IT's impact on key business processes by leveraging PathView's unique network path performance data. When performance issues occur, Report Server's intuitive graphics combined with advanced diagnostics make it faster and easier to find and fix them.
